

Comprehensive User Manual: Implementing Group-Based User Restrictions for Blog Management

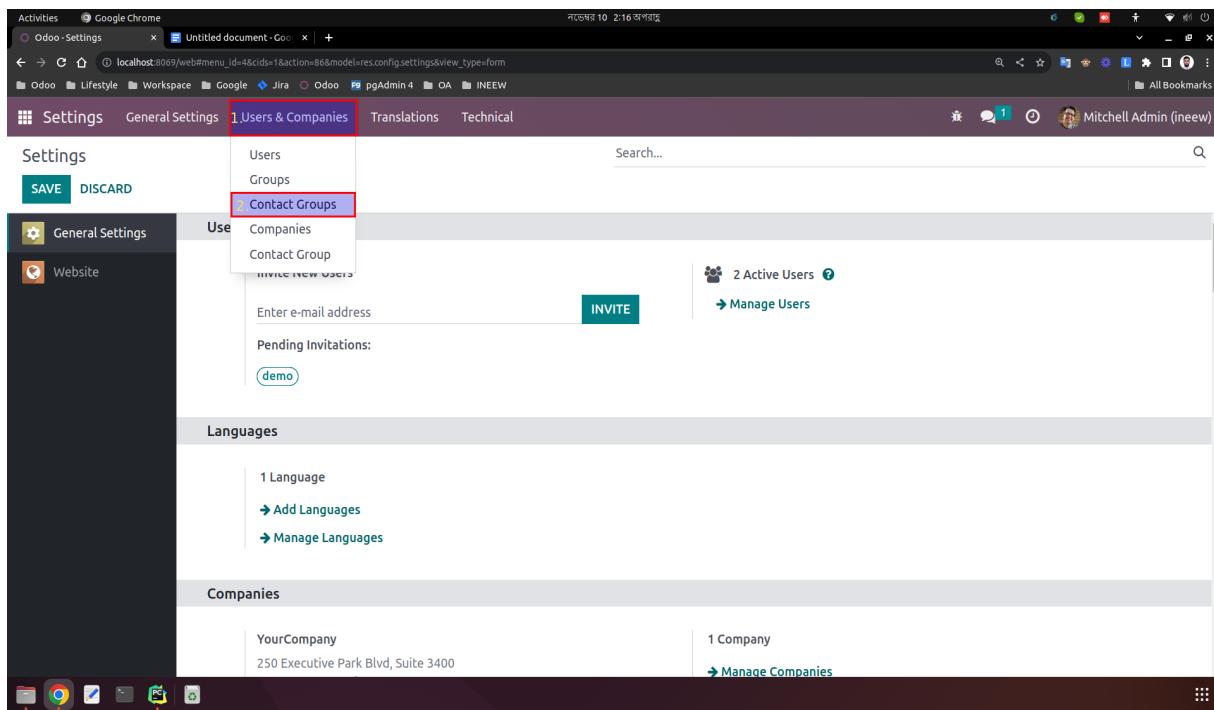

Company: Ineew
Website: wefeem.ineew.com

Step 1: Create User Groups

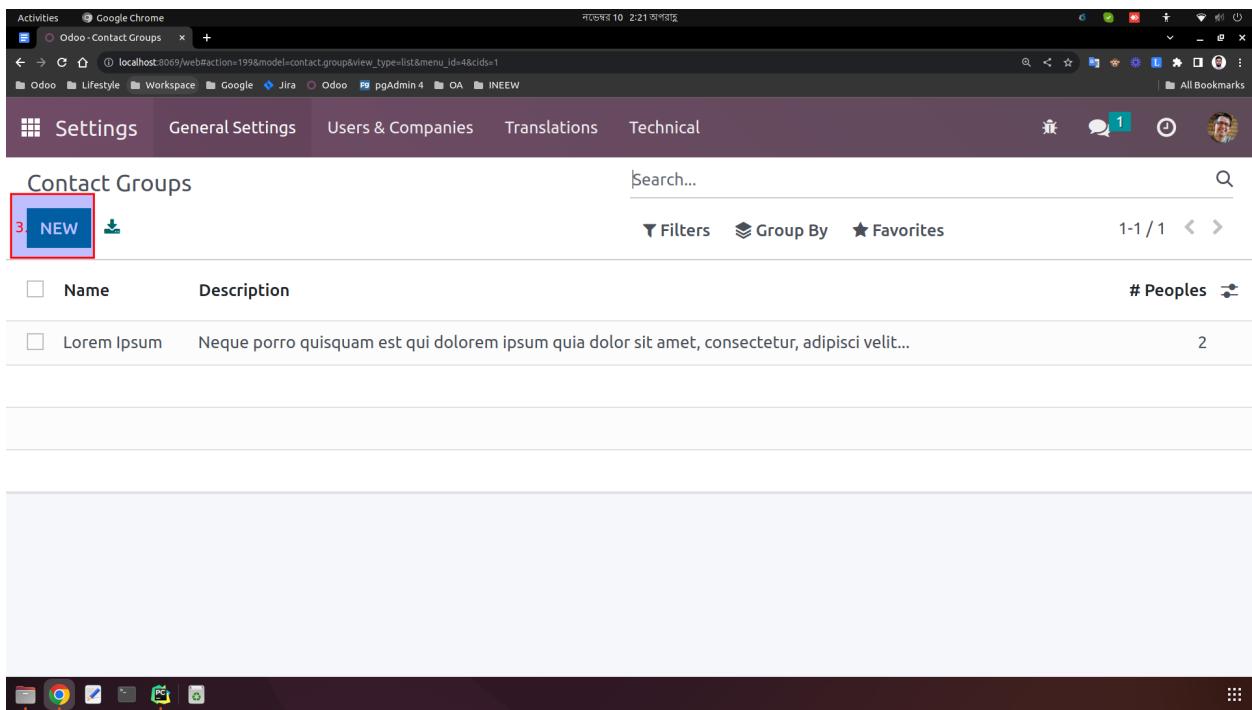

→ Please choose "Settings" as indicated in the screenshot below.

→ Please choose "User & Companies" as indicated in the screenshot below

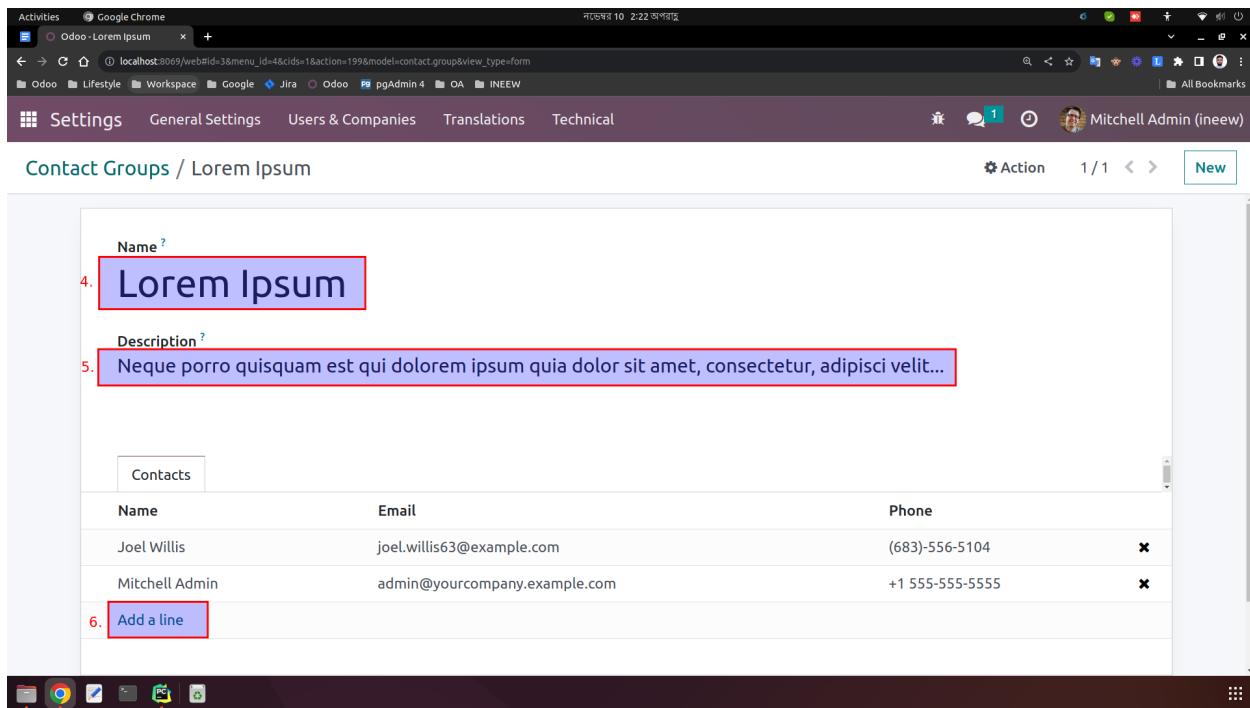

→ Please choose "New" as indicated in the screenshot below to create New group with many of users.

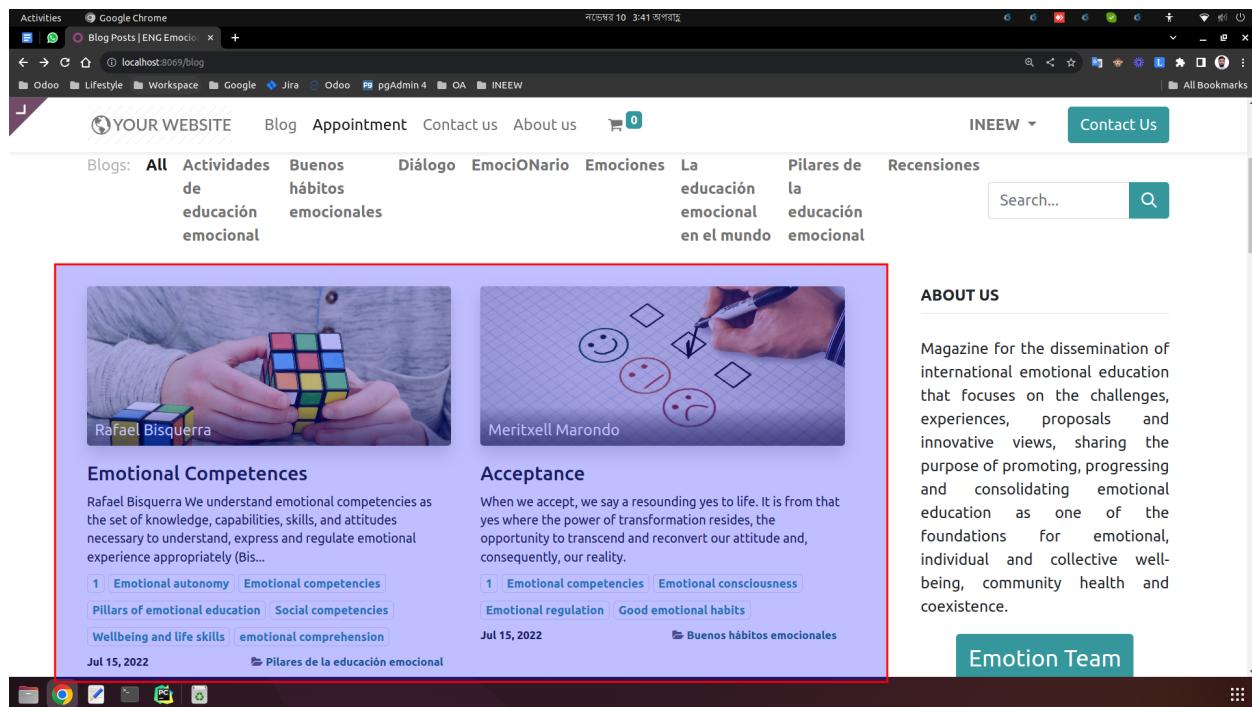

The screenshot shows the Odoo Contact Groups module in a web browser. The top navigation bar includes 'Activities', 'Odoo - Contact Groups', and other tabs like 'General Settings', 'Users & Companies', 'Translations', and 'Technical'. A search bar and a toolbar with icons for filters, group by, and favorites are also present. The main area displays a list of contact groups, with the first item, 'Lorem Ipsum', selected. The 'Name' column shows a checkbox and the name 'Lorem Ipsum'. The 'Description' column contains a placeholder text: 'Neque porro quisquam est qui dolorem ipsum quia dolor sit amet, consectetur, adipisci velit...'. The '# Peoples' column shows the value '2'. A red box highlights the '3. NEW' button in the top-left corner of the list area. The bottom of the screen shows the Linux desktop environment with various application icons in the dock.

→ Please Set “Name”, “Description (Optional)” and “Contacts/Users” as indicated in the screenshot below.

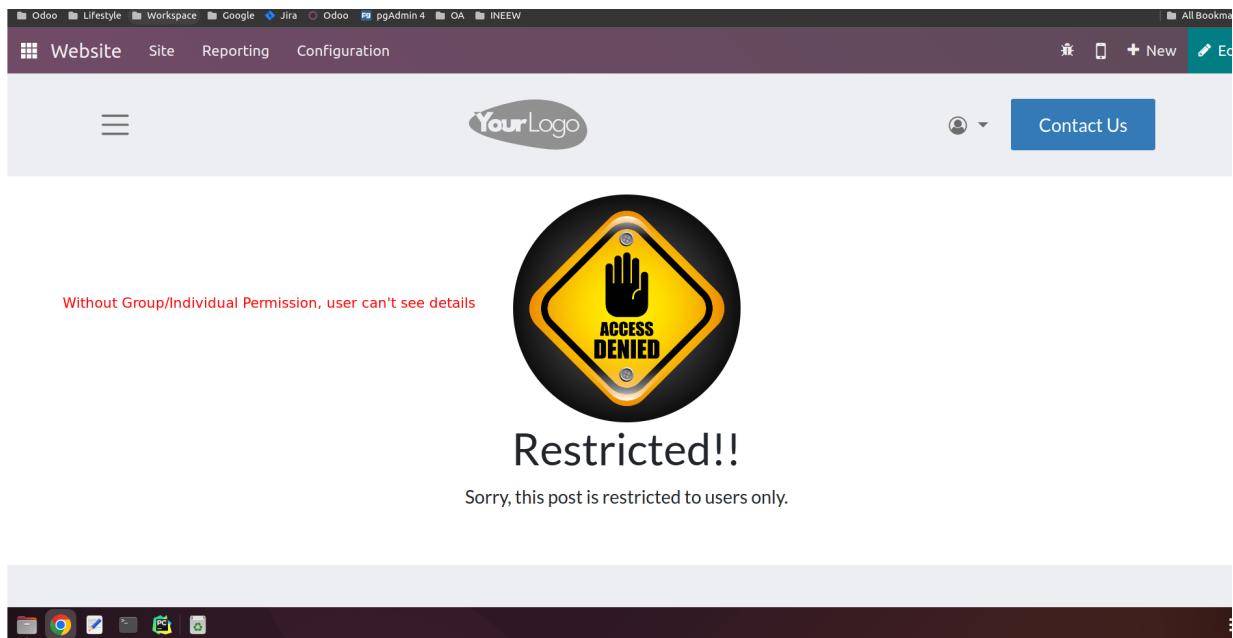

Step 2: Use created groups for Website Blogs

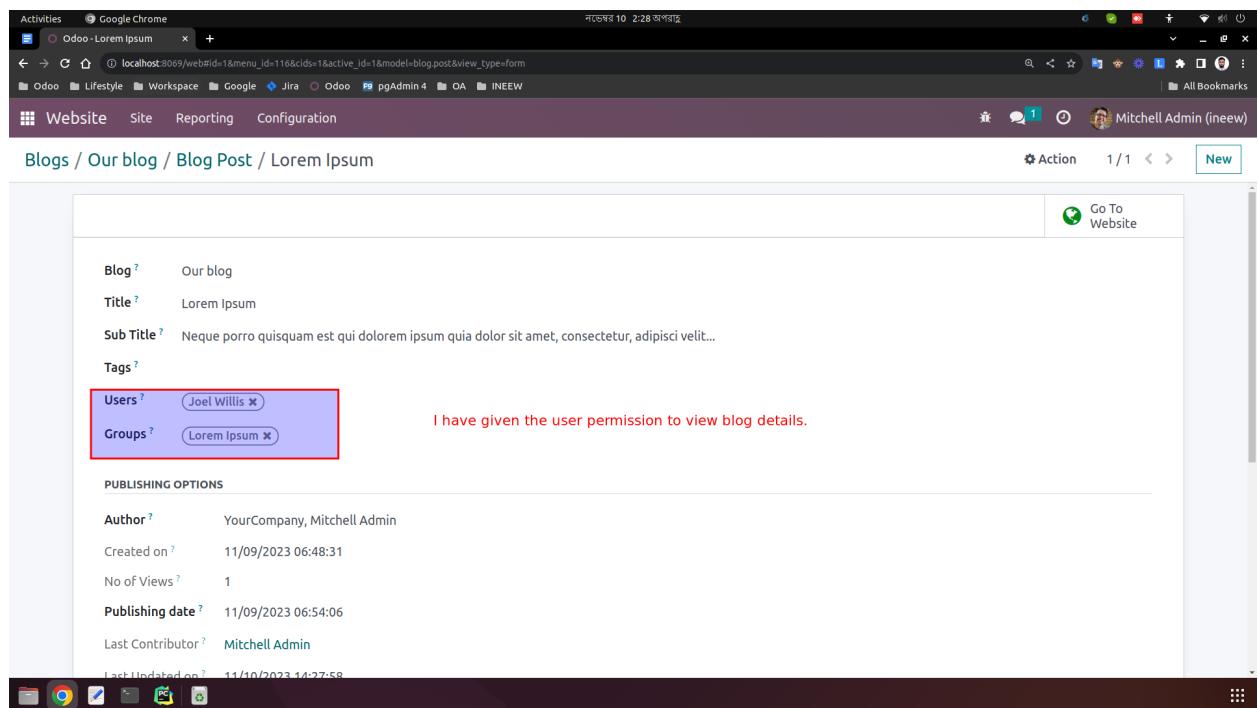

→ Now you can see all of your blogs on the website as indicated in the screenshot below.

→ But details are restricted as indicated in the screenshot below.

→ Add your created groups to any blog to permit group of users/individual users to view blog details as indicated in the screenshot below.

→ Hola! Now you can see the blog details as indicated in the screenshot below.
